***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. **Claims 21-28,37-46**, drawn to an electric machine with rotor winding , classified in class 310, subclass 91.
  - II. Claims 29-36,47-55, drawn to a method of forming an electric machine , classified in class 29, subclass 629.
2. Inventions I and II are related as process of making and product made.
3. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case a rotor winding can be made by different method such as casting or molding rather than sliding (pressing) the cylinder part in to the resin. and also sliding and pressing a ring in to the resin can be used in several application such as ring shape stator with resin cover. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. A telephone call was made to Applicant attorney on June 10, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
